Question 1
Correct
Marked out of 5.00
Frequencies

Create a class known as "BankAccount" with methods called deposit() and withdraw().

Create a subclass called SavingsAccount that overrides the withdraw() method to prevent withdrawals if the account balance falls below one hundred.

## For example:

## Result

Create a Bank Account object (A/c No. BA1234) with initial balance of \$500:
Deposit \$1000 into account BA1234:
New balance after depositing \$1000: \$1500.0
Withdraw \$600 from account BA1234:
New balance after withdrawing \$600: \$900.0
Create a SavingsAccount object (A/c No. SA1000) with initial balance of \$300:
Try to withdraw \$250 from SA1000!
Winimum balance of \$100 required!
Balance after trying to withdraw \$250: \$300.0

Answer: (penalty regime: 0 %)

## Reset answer

```
1 v class ba{
            int bal;
            ba(int b){
                 this.bal=b;
            void deposit(int a){
            void withdraw(int a){
 10
                bal-=a;
 11
            int gb(){
   return bal;
 12
 13
 14
 15
      class sa extends ba{
    sa(int b){
 17
 18
                super(b);
 19
 20
 21
                 if((bal-a)<100){
 22
                      System.out.println("Minimum balance of $100 required!");
 23
 24
                 else{
 25
                      bal-=a;
 26
                }
 27
 28
      public class hello{
            public static void main(String[] args){
   ba BA1234=new ba(500);
 30
 31
                 sa SA1000=new sa(300);
 32
 33
                 System.out.println("Create a Bank Account object (A/c No. BA1234) with initial balance of $500:");
                 System.out.println("Deposit $1000 into account BA1234:"); BA1234.deposit(1000);
 34
 35
 36
37
                 System.out.println("New balance after depositing $1000: $"+BA1234.gb()+".0"); System.out.println("Withdraw $600 from account BA1234:");
 38
39
                 BA1234.withdraw(600);
System.out.println("New balance after withdrawing $600: $"+BA1234.gb()+".0");
                 System.out.println("Create a SavingsAccount object (A/c No. SA1000) with initial balance of $300:"); System.out.println("Try to withdraw $250 from SA1000!");
 40
 41
                 SA1000.withdraw(250);
System.out.println("Balance after trying to withdraw $250: $"+SA1000.gb()+".0");
 43
 45

Fee Flag question

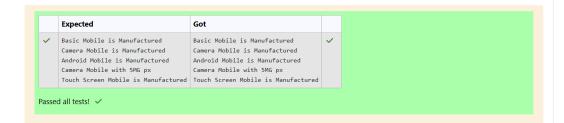

Create a class Mobile with constructor and a method basicMobile(). Create a subclass CameraMobile which extends Mobile class, with constructor and a method newFeature(). Create a subclass AndroidMobile which extends CameraMobile, with constructor and a method androidMobile(). display the details of the Android Mobile class by creating the instance. class Mobile( class CameraMobile extends Mobile { class AndroidMobile extends CameraMobile { expected output: Basic Mobile is Manufactured Camera Mobile is Manufactured Android Mobile is Manufactured Camera Mobile with 5MG px Touch Screen Mobile is Manufactured For example: Result Basic Mobile is Manufactured

Camera Mobile with 5MG px Touch Screen Mobile is Manufactured

Answer: (penalty regime: 0 %)

Camera Mobile is Manufactured
Android Mobile is Manufactured

```
1 - class m{
          m(){
               System.out.println("Basic Mobile is Manufactured");
  4
5
  6 <sub>1</sub>
      class cm{
          void nf(){
            System.out.println("Camera Mobile with 5MG px");
  8
  10
               System.out.println("Camera Mobile is Manufactured");
 11
  12
 13
  14 v class am{
 15
          void an(){
             System.out.println("Touch Screen Mobile is Manufactured");
 16
 17
 18 🔻
          am(){
 19
               System.out.println("Android Mobile is Manufactured");
          }
 20
 21
 22 - public class hello{
 23
         public static void main(String [] args){
              m mm=new m();
cm c=new cm();
 24
  25
 26
              am a=new am();
 27
 28
              a.an();
  29
          }
```

Question **3**Correct
Marked out of 5.00

Frag question

create a class called College with attribute String name, constructor to initialize the name attribute, a method called Admitted(). Create a subclass called CSE that extends Student class, with department attribute, Course() method to sub class. Print the details of the Student.

College:

30 }

String collegeName;

public College() { }

public admitted() { }

Student:

String studentName;

String department;

public Student(String collegeName, String studentName,String depart) { }

public toString()

Expected Output:

A student admitted in REC CollegeName : REC

StudentName : Venkatesh

```
Department : CSE
For example:
Result
A student admitted in REC
CollegeName : REC
StudentName : Venkatesh
Department : CSE
Answer: (penalty regime: 0 %)
 Reset answer
 1 | class College
       protected String collegeName;
   5 v public College(String collegeName) {
this.collegeName=collegeName;
  11
12 }
  13 | 1
  14 class Student extends College{
  15
  16 String studentName;
17 String department;
  18
  19 public Student(String collegeName, String studentName, String depart) {
          super(collegeName);
this.studentName=studentName;;
  20
  21
  22
23
          this.department=depart;
 23 }
24 |
25 * public String toString(){
26 | return "CollegeName : "+collegeName+"\n"+
27 | "StudentName : "+studentName+"\n"+
28 | "Department : "+department;
```
